

CS5450 MOBILE PROGRAMMING
DR. SABAH MOHAMMED (PROFESSOR & PROFESSIONAL ENGINEER)
DEPARTMENT OF COMPUTER SCIENCE
CHALLENGE 1: MOBILE KOTLIN JETPACK COMPOSE APPLICATIONS (30 POINTS)

Each group will be responsible to develop App assigned to this group:

- Group # 1: Health Monitoring App (e.g. WeightWatchers)
- Group # 2: Personal Organizer App (e.g. WonderList)
- Group # 3: Appointment Colander App (e.g. Calendly)
- Group # 4: Mobile Shop (e.g. Shopify)
- Group # 5: IQ Test App (e.g. many on Google Play)
- Group # 6: Currency Converter App (e.g. Easy Currency Converter)
- Group # 7: Photo Organizer (e.g. Sidebox)
- Group # 8: My City Tourist Attractions App (e.g. Thunder Bay Tours App)
- Group # 9: Kotlin Compose Quiz App (e.g. Many on Google Play)
- Group # 10: Restaurant Menu App (e.g. Many on Google Play)

Normally it should be composed of multi widgets and screens with main functionality that supports the application with your custom styling. The detailed idea of the app should be designed by the group team and the group should practice how to split the different part of programming among the group members

General Notes:

- (1) Every challenge will be marked in two ways: by instructor/TA who will give you the mark (12% on the Zip package on D2L) and by your colleagues who will vote for the best three winners. The best three winners will get 3, 2 or 1 mark bonus.
- (2) The group **must** demonstrate the solution to the challenge via Zoom presentation (3%).
- (3) 30 Points will be converted to the 15% mark as provided by the course outline.

Requirements

1. Use the latest Flutter on Android Studio
2. Provide a README.pdf file explaining how to configure and run your solution to this challenge including some screen shots. The README.PDF should describe the exact project structure.
3. Create a Public Account and upload your Full-Android Studio challenge1. Mention clearly the link to your Github in your README.PDF.
4. Upload the challenge solution package as ZIP file to the class course management (e.g. D2L). Two ways are recommended to package your project (follow them both):
 - 1. Export as a ZIP Archive (To Share Source Code)**
To share your entire project including source files and configuration:
Natively: Go to File | Export | Project to Zip File (if available in your version).
Manually: Locate your project folder on your computer, right-click the root folder, and select Compress (macOS) or Send to > Compressed (zipped) folder (Windows).
Note: When importing this on another machine, use File | Open and select the directory rather than "Import from Zip" for better compatibility.
 - 2. Share via GitHub**
The most professional way to "export" a project for collaboration:
Go to VCS | Share Project on GitHub.
Follow the prompts to log in and create a repository. This makes your code accessible via a URL for others to clone or download.
5. Upload the README.PDF
6. Present your Challenge App using Zoom..
7. Bonus "challenge voting" will be emailed as Google form after the challenge presentations.

Grading Criteria

Base Grade					
Categories	A	B	C	D	F
Programming (Kotlin/Jetpack Compose))	9-10	8	7	6	<=5
Functionalities demonstrated by Android/iOS Emulator/ Chrome(web)	9-10	8	7	6	<=5
App Design, Arts, Responsive Design	9-10	8	7	6	<=5
Total	0–30				
Adjustments					
App has minor technical flaw(s)	–3				
App does not work or not presented in Class	–15				
Failed to turn-in resources (partially)	–3				
Missed deadline	–3/day				
Work only on Chrome (Web)	-2				
Work on the Actual Phone Device	+2				
Copied work from other students or from over the web	-30				

Key	
A	Professional quality work.
B	Above average student work. Goes above and beyond what's required.
C	Average student work. Meets the minimum requirements of the project.
D	Below average work. Fails to meet minimum standard.
F	Incomplete or very poor.

Note: Respecting the student behaviour code is highly appreciated:
